#### 4.5.1 IF...ELSEIF...ELSEIF...ELSE

	A	B	C	D	E	F
1	5	22				
2	7	24				

Write an IF statement to handle this situation:

- If the value in A1 is less than 10, return "LOW"
- If the value in A1 is between 10 and 20 (inclusive), return "MEDIUM"
- If the value in A1 is between 21 and 30 (inclusive), return "HIGH"
- If the value in A1 is greater than 30, return "VERY HIGH"

```
=IF(A1 < 10; "LOW";
  IF(AND(A1 >= 10; A1 <= 20); "MEDIUM";
    IF(AND(A1 >= 21; A1 <= 30); "HIGH";
      "VERY HIGH")))
```

A shorter version:

```
=IF(A1 < 10; "LOW";
  IF(A1 <= 20; "MEDIUM";
    IF(A1 <= 30; "HIGH";
      "VERY HIGH")))
```

The answer is

LOW

Use IFS function (if your Excel supports it):

```
=IFS(A1 < 10; "LOW";
  AND(A1 >= 10; A1 <= 20); "MEDIUM";
  AND(A1 >= 21; A1 <= 30); "HIGH";
  A1 > 30; "VERY HIGH")
```

#### 4.5.2 How many real roots?

	A	B	C	D	E	F
1	-1	5	100			
2	=POWER(B1; 2) - 4 * A1 * C1					

Write an IF statement (indeed they are expressions in Excel) to determine how many real roots the quadratic equation  $Ax^2 + Bx + C = 0$  has, based on the values in A1, B1, and C1. Return 0 (No real roots), 1 (repeated root), or 2 (two real roots).

```
=IF(B2 < 0; 0;
  IF(B2 = 0; 1; 2))
```

Use IFS function (if your Excel supports it):

```
=IFS(B2 < 0; 0;
  B2 = 0; 1;
  B2 > 0; 2)
```

#### 4.5.3 How is the weather outside?

Suppose that the temperature is in cell A1 (in degrees Celsius). Write an IF statement to return the following:

- If the temperature is less than or equal to 0, return "Freezing"
- If the temperature is greater than 0 but less than or equal to 15, return "Cold"
- If the temperature is greater than 15 but less than or equal to 25, return "Warm"

- If the temperature is greater than 25 but less than or equal to 35, return "Hot"
- If the temperature is greater than 35, return "Too Hot"

```
=IF(A1 <= 0; "Freezing";
  IF(A1 <= 15; "Cold";
    IF(A1 <= 25; "Warm";
      IF(A1 <= 35; "Hot";
        "Too Hot"))))
```

Use IFS function (if your Excel supports it):

```
=IFS(A1 <= 0; "Freezing";
  A1 <= 15; "Cold";
  A1 <= 25; "Warm";
  A1 <= 35; "Hot";
  A1 > 35; "Too Hot")
```

## 5 Random Numbers

### 5.1 RAND

	A	B	C	D	E	F
1		=RAND()				
2						

```
// A random number between 0 and 1, e.g.

```

### 5.2 RANDBETWEEN

	A	B	C	D	E	F
1		=RANDBETWEEN(1; 10)				
2						

```
// A random integer between 1 and 10, e.g.

## 7.16 VLOOKUP

Basic Usage:

=VLOOKUP(lookup\_value; table\_array; col\_index\_num; [range\_lookup])

where

- **lookup\_value** is the value to search for in the first column of the table\_array
- **table\_array** is the range of cells that contains the data
- **col\_index\_num** is the column number in the table\_array from which to retrieve the value
- **range\_lookup** is a logical value that specifies whether to find an exact match (FALSE) or an approximate match (TRUE). If omitted, TRUE is assumed

	A	B	C	D	E	F
1	2	Economics				
2	3	Industrial Relations				
3	5	Econometrics				
4	8	Business Administration				
5		=VLOOKUP(8; A1:B4; 2; FALSE)				

Business Administration

Description of the example:

- The function looks for the value 8 in the first column of the range A1:B4
- It finds the value 8 in cell A4
- It then retrieves the value from the second column of the same row, which is "Business Administration"

	A	B	C	D	E	F
1	101	Introduction to Economics	4			
2	102	Information Technologies	2			
3	103	Basic Statistics	3			
4	104	Operations Research	3			
5		=VLOOKUP(104; A1:C4; 3; FALSE)				

The output:

3

Why? Because the function looks for the value 104 in the first column of the range A1:C4, finds it in cell A4, and retrieves the value from the third column of the same row, which is 3.

## 8 Visual Basic for Applications (VBA)

### 8.1 times function

```
' This function returns the product of two numbers
Function times(a, b)
    times = a * b
End Function
```

Usage in Excel:

=times(5; 6)

### 8.2 factorial function

```
Rem This function returns factorial of n
Function factorial(n)
    Dim result As Long
    Dim i As Long
    result = 1

    For i = 2 To n
        result = result * i
    Next

    factorial = result
End Function
```

Usage in Excel:

=factorial(5)

### 8.3 paraboladelta function

```
Rem This functions returns delta of a given parabola
Function paraboladelta(a As Double, b As Double, c As Double) As Double
    paraboladelta = b * b - 4 * a * c
End Function
```

Usage in Excel:

=paraboladelta(1; -3; 2)

## 8.4 numberofroots function

```
' This function returns
' -> 0, if delta < 0
' -> 1, if delta = 0
' -> 2, if delta > 0
Function numberofroots(a As Double, b As Double, c As Double) As Integer
    Dim delta As Double
    delta = b * b - 4 * a * c
    If delta < 0 Then
        numberofroots = 0
    ElseIf delta = 0 Then
        numberofroots = 1
    Else
        numberofroots = 2
    End If
End Function
```

Usage in Excel:

=numberofroots(1; -3; 2)

## 8.5 findminimum function

```
' This function returns the minimum of a given range
Function findminimum(r As Range) As Double
    mymin = 9999999
    For i = 1 To r.Count
        If r.Cells(i, 1) < mymin Then
            mymin = r.Cells(i, 1)
        End If
    Next
    findminimum = mymin
End Function
```

Usage in Excel:

=findminimum(A1:A10)
